Connecting Xbox One to Internet with LAN Cable .....	2
Connecting Xbox One to Internet with Wi-Fi .....	5
Checking Xbox One IP Address status .....	9

## Connecting Xbox One to Internet with LAN Cable

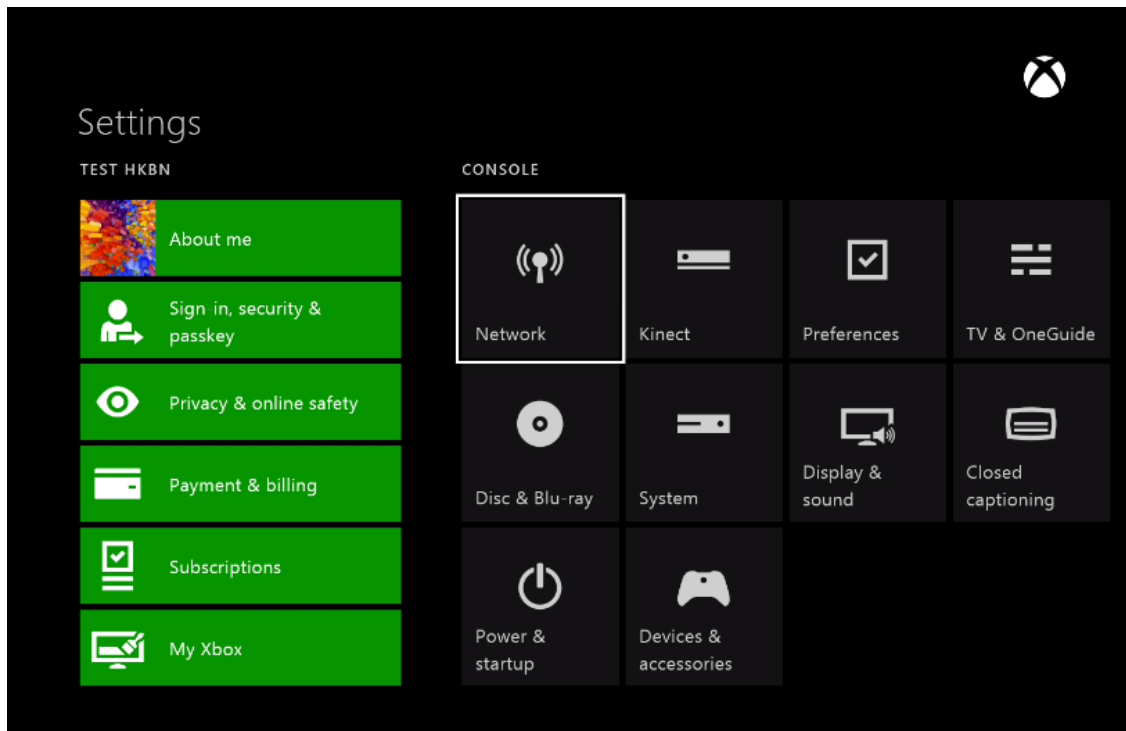

- 1) Make sure you have a LAN cable connected from the HKBN wall plate/ONT/Router to the LAN port of your Xbox One. Once finished, switch on the power supply for Xbox One.

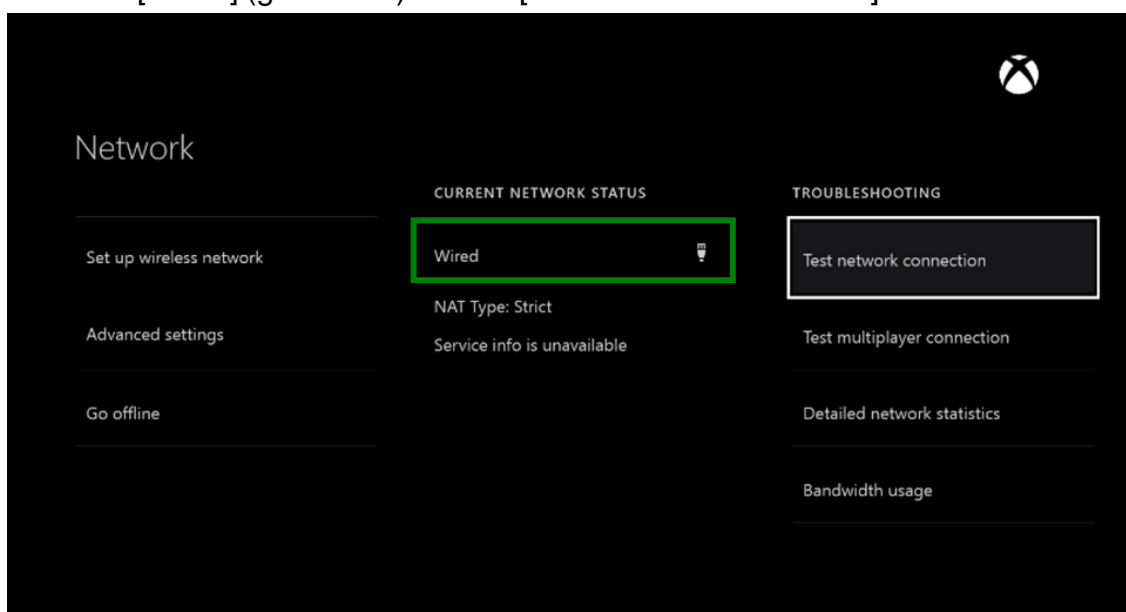

- 2) Press the [Xbox] button on the controller, select [Settings].

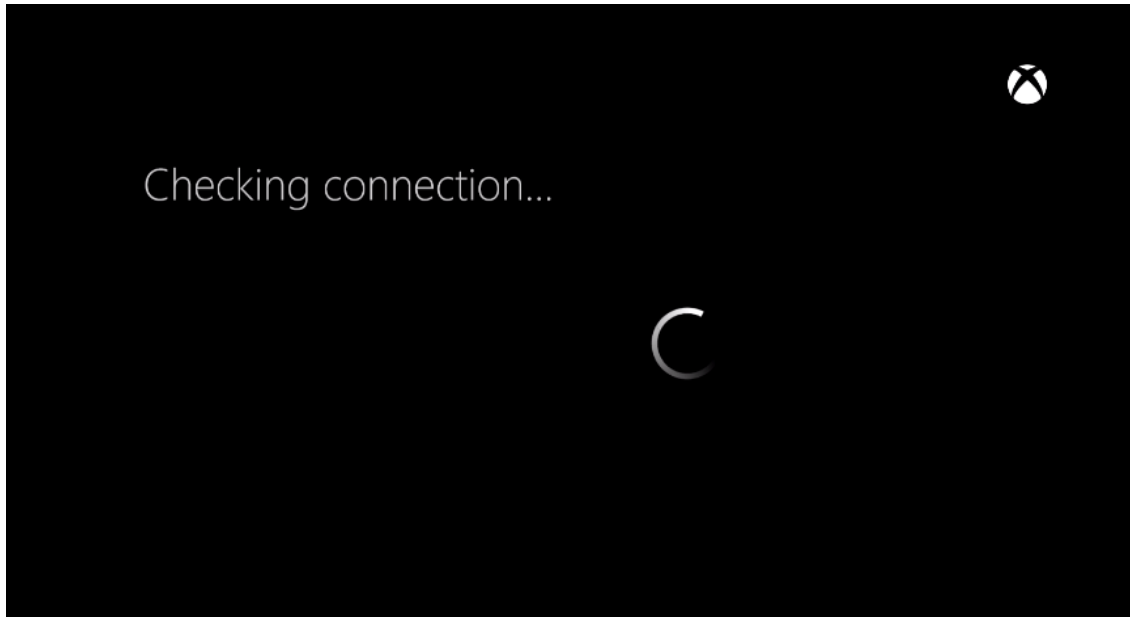

3) In the [Settings] page, select [Network] under [Console].

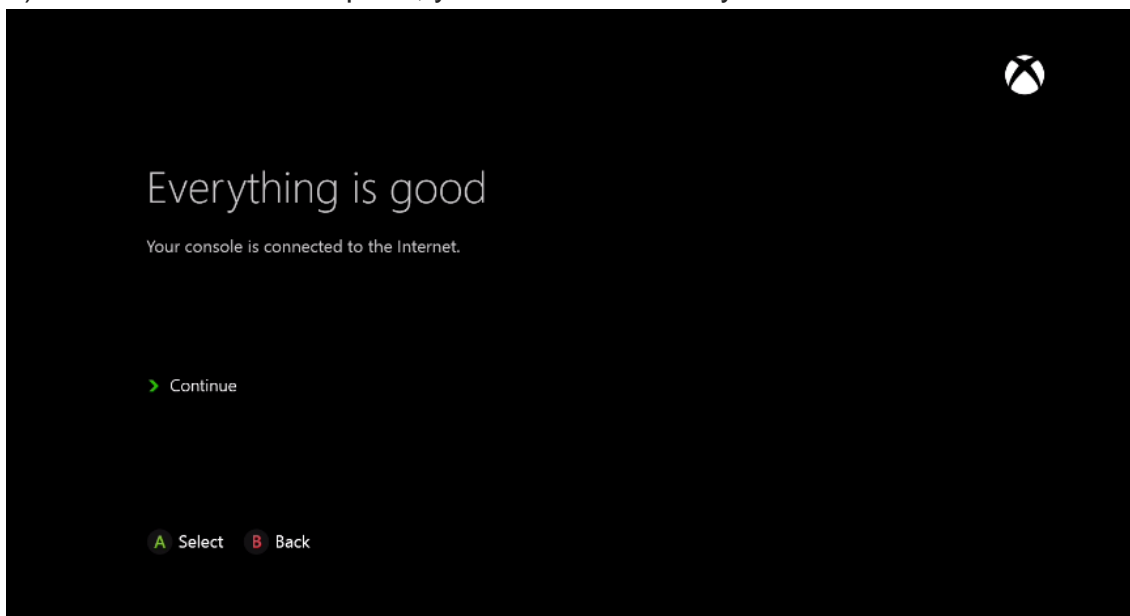

4) If Xbox One detects a connection to the Internet, [CURRENT NETWORK STATUS] will show [Wired] (green box). Select [Test network connection] to test the network connection.

5) System will perform a test to check the connection.

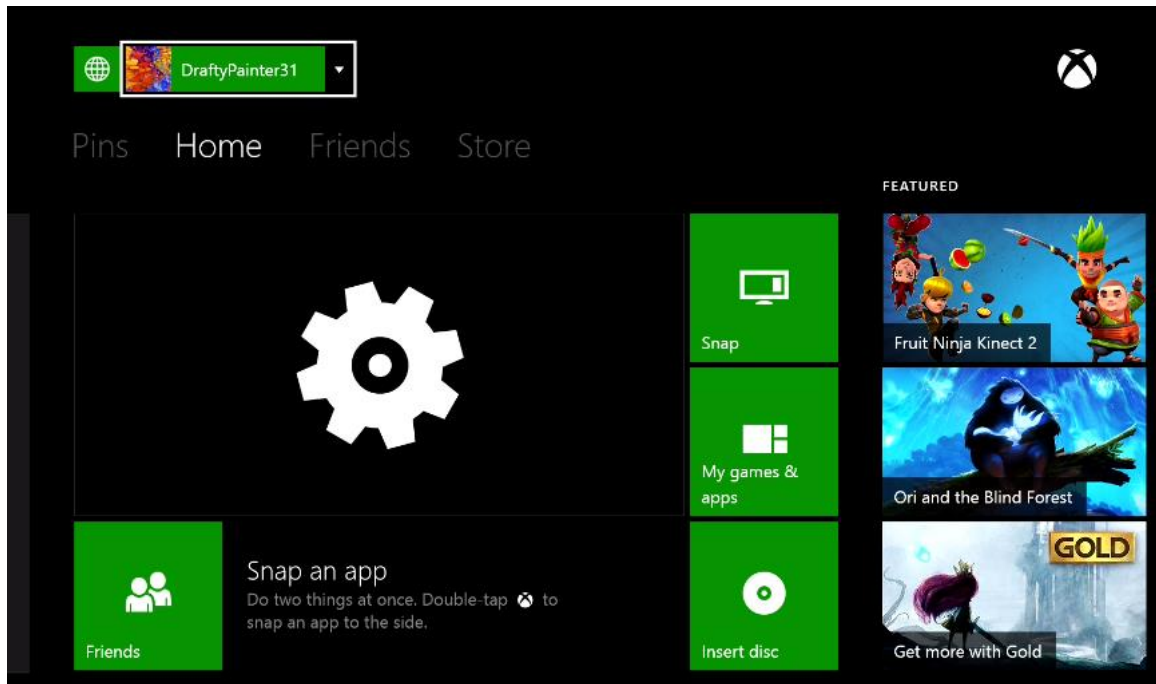

6) Once the test is complete, your console is ready to connect to the Internet.

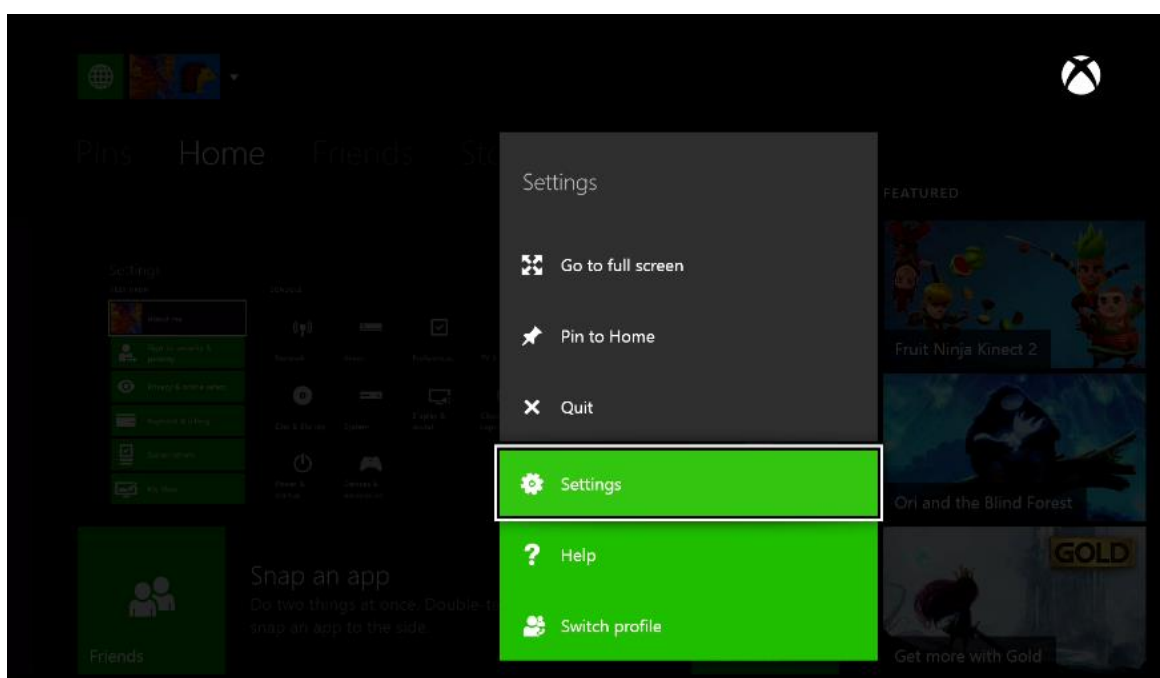

## Connecting Xbox One to Internet with Wi-Fi

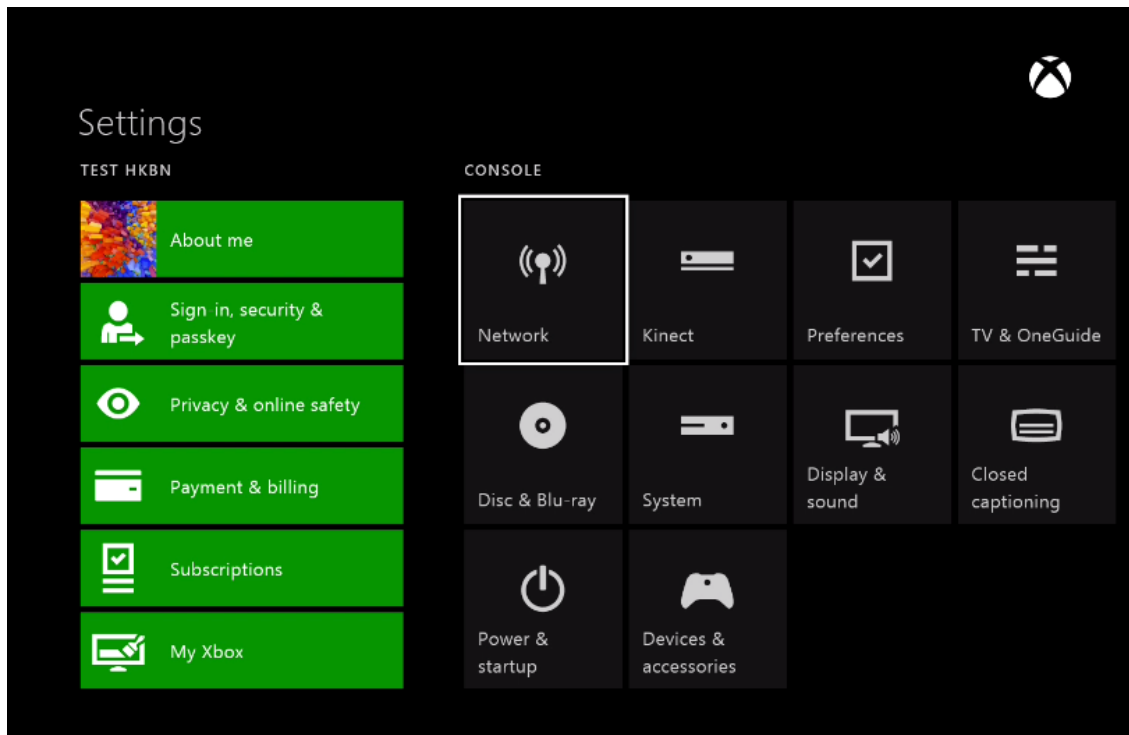

- 1) Switch on the power supply for Xbox One.

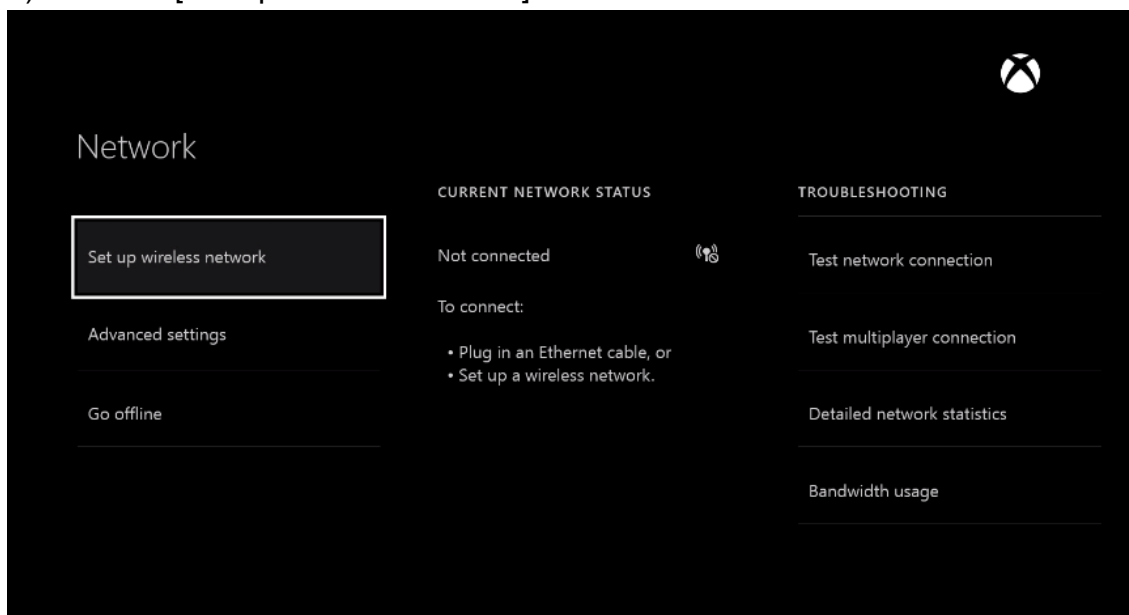

- 2) Press the [Xbox] button on the controller, then choose [Settings].

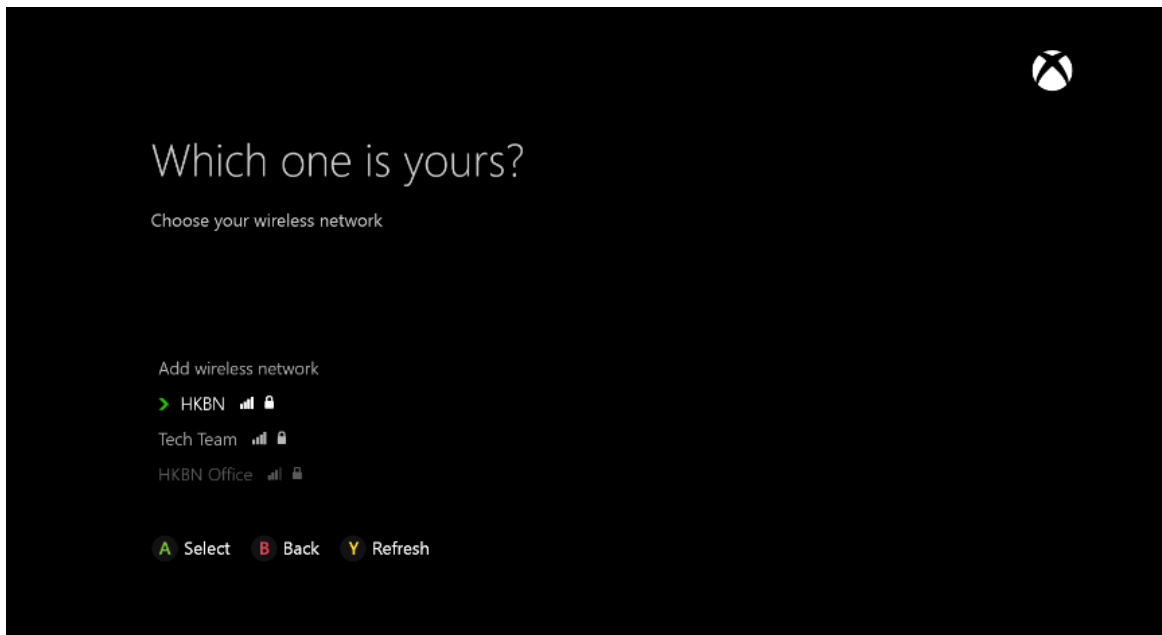

3) In the [Settings] page, select [Network] under [Console].

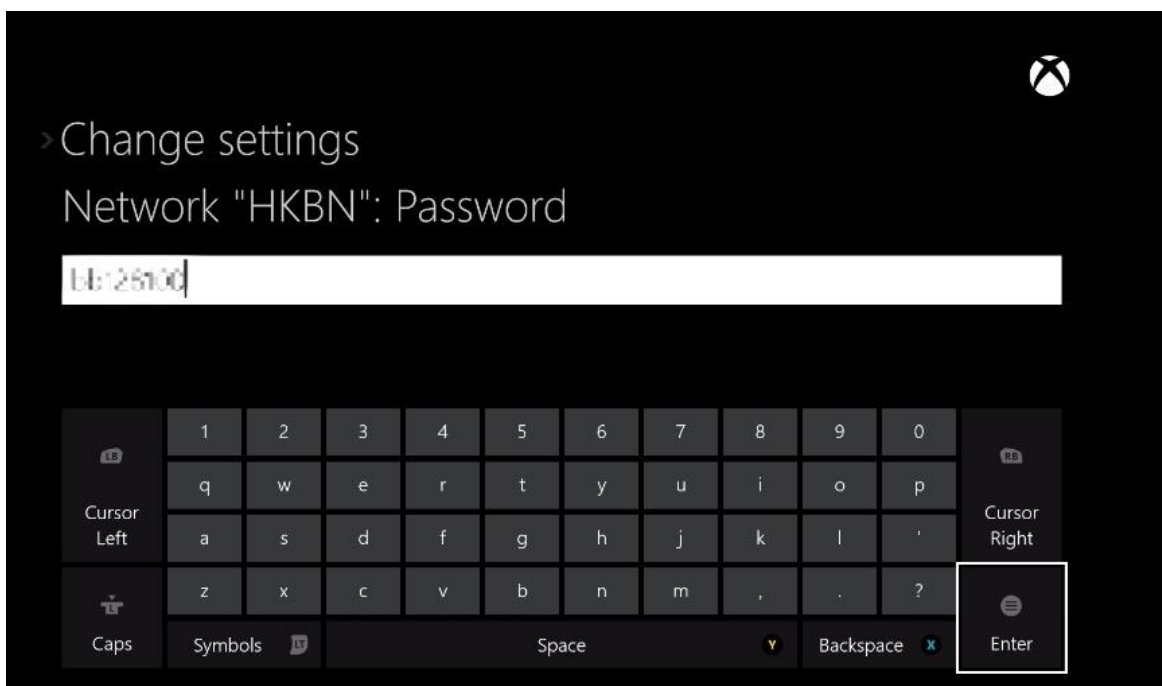

4) Choose [Set up wireless network].

5) Choose the Wi-Fi network name (SSID) that you wish to connect with.

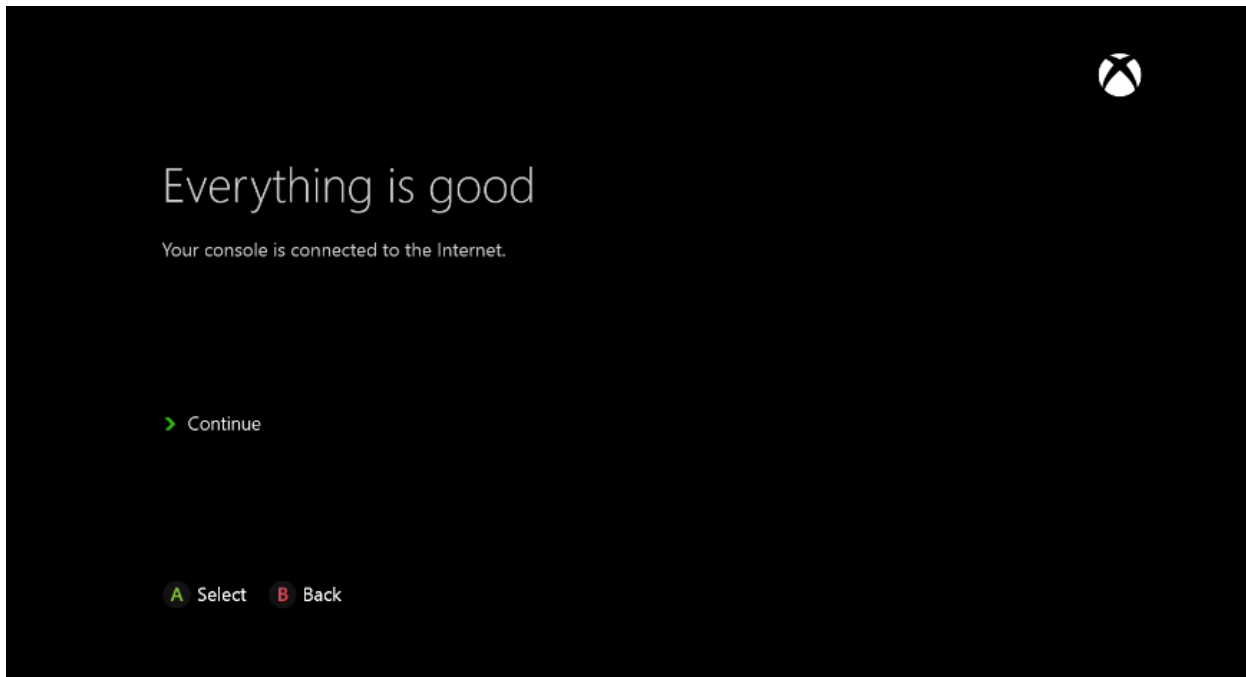

6) Enter the Wi-Fi network password, then click [Enter].

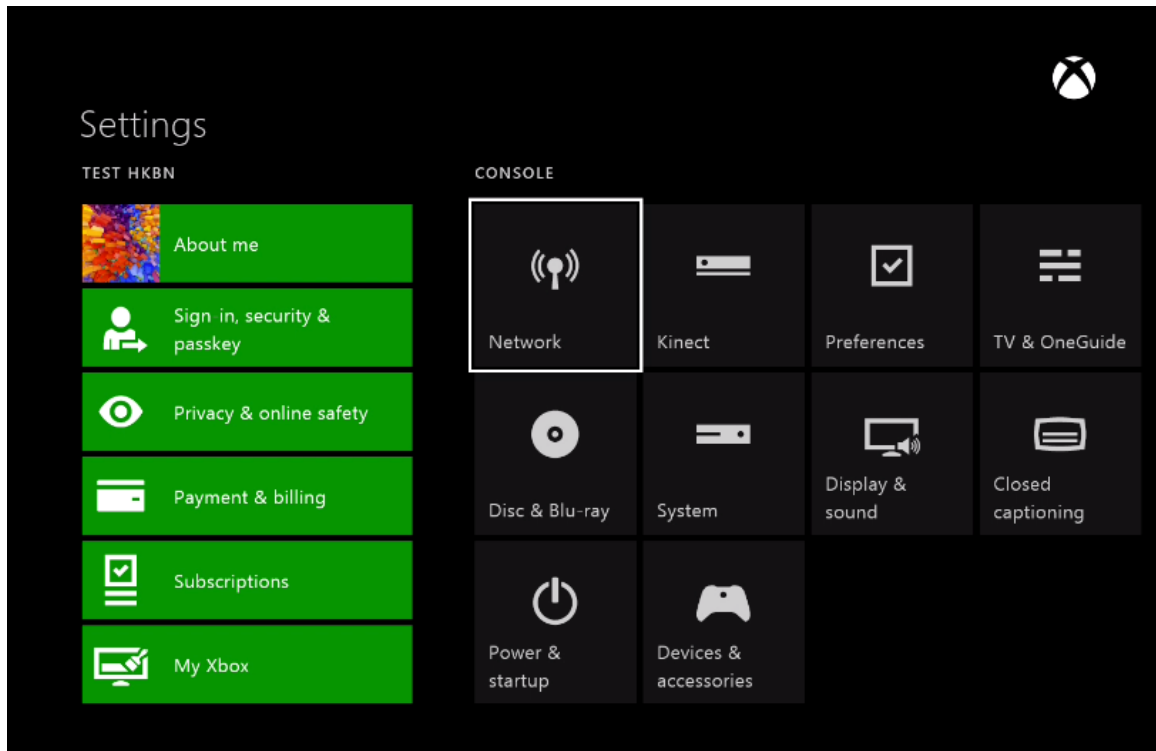

7) System will update the Internet settings. Once complete, message below will be displayed.

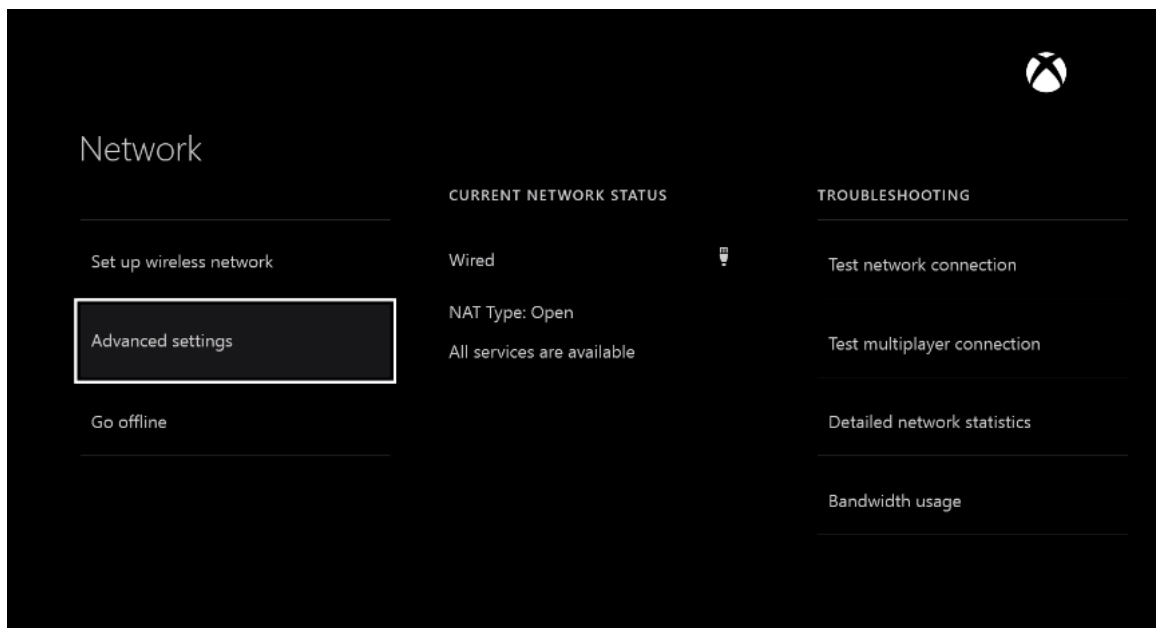

## Checking Xbox One IP Address status

1) In the [Settings] page, select [Network] under [Console].

2) Select [Advanced settings].

- 3) The [Change settings] page will display information relevant to IP address, Subnet Mask & DNS.
